

Index

Indices of abbreviations and symbols.....	I
1 Introduction and aims of the thesis.....	1
2 Current state of research	6
2.1 Bacterial production systems	6
2.1.1 <i>Bacillus megaterium</i>	7
2.1.2 Protein A	9
2.1.3 Antibodies and α -Lysozyme D1.3scFv	10
2.2 Affinity and affinity chromatography	12
2.2.1 Affinity tags.....	12
2.3 Superparamagnetic iron oxide nanoparticles for product purification	14
2.3.1 Functionalization using divalent metal cations	16
2.3.2 Magnetic separation of super paramagnetic iron oxide nanoparticles	17
2.3.3 Particle systems used in the course of this scientific work	18
3 Materials and methods	20
3.1 Separation and simulation.....	20
3.1.1 Particle systems	20
3.1.2 Separation using handheld magnets.....	21
3.1.3 Parameter screening for particle separation in an external loop.....	21
3.1.4 Simulation of magnetic field lines	22
3.2 Cultivation protocols.....	22
3.2.1 Strain construction	22
3.2.2 Shake flask cultivation and strain maintenance	24
3.2.3 Screening of plasmids for highest productivity	26
3.2.4 Adsorption isotherms	26
3.2.5 <i>In situ</i> -product removal from shake flask cultivations.....	27
3.2.6 <i>In situ</i> -product removal from reactor cultivations (partly automated).....	29
3.2.7 <i>In situ</i> -product removal from reactor cultivations (automated)	31
3.2.8 Cleaning in place of automated reactor set-up.....	33
3.3 Analysis protocols.....	33
3.3.1 Nickel leakage.....	33
3.3.2 Quantitative product analysis	34

3.3.3 Qualitative product and quantitative purity analysis	34
3.3.4 Protein purification for production of standards.....	34
3.3.5 HPLC analysis of carbon sources and acetate	37
4 Results and discussion	38
4.1 Enhancing the efficiency in product analytics.....	38
4.2 Cultivation of recombinant <i>B. megaterium</i> and production of recombinant Protein A in shake flasks	41
4.3 Pre-experiments for <i>in situ</i> -affinity purification using recombinant Protein A	42
4.4 <i>In situ</i> -separation in shake flask cultivation	48
4.4.1 Protein A separation and product purity using GNTA-SPION.....	48
4.4.2 Protein A separation and product purity using SD-SPION	54
4.5 Pre-experiments for automated and integrated product separation in a lab-scale stirred tank bioreactor cultivation.....	59
4.5.1 Automation of particle separation	59
4.5.2 Simulation of magnetic fields and evaluation of particle separation using GNTA-SPION.....	61
4.5.3 Particle separation using SD-SPION	67
4.5.4 <i>B. megaterium</i> cultivation in a lab-scale stirred tank bioreactor	69
4.6 Integrated <i>in situ</i> -separation of Protein A in stirred tank bioreactor cultivation ...	70
4.7 Automated <i>in situ</i> -separation of Protein A in stirred tank bioreactor cultivation ..	72
4.8 Overall comparison of shake flask and stirred tank bioreactor cultivations using GNTA- and SD-SPION for purification of recombinant Protein A.....	79
4.9 Production of recombinant D1.3scFv	81
4.10 Automated <i>in situ</i> -separation of D1.3scFv antibody fragment in stirred tank bioreactor cultivation	84
5 Conclusion and outlook	87
6 Literature	90
