
Table of contents

1	Introduction and aim of the thesis	1
2	Theoretical background.....	4
2.1	<i>Lentzea aerocolonigenes</i> and rebeccamycin.....	4
2.1.1	Medical applications.....	5
2.1.2	Production of rebeccamycin	5
2.1.3	Purification of rebeccamycin.....	8
2.2	Morphology and productivity of filamentous microorganisms	8
2.2.1	Microparticle enhanced cultivation (MPEC).....	11
2.2.2	Macroparticle-enhanced cultivation	14
2.2.3	<i>In-situ</i> product recovery with adsorbent resins.....	16
2.2.4	Cell morphological characterization and pellet viability	17
2.3	Bubble-free aeration in bioreactors.....	18
2.3.1	Membrane aerated bioreactors	20
2.3.2	Oxygen transfer in bioreactors	21
3	Material and methods.....	23
3.1	Strain and cultivation medium.....	23
3.2	Particles	23
3.2.1	Surface modified microparticles.....	23
3.2.2	Macroparticles.....	25
3.2.3	Adsorbent particles for <i>in-situ</i> product removal.....	25
3.2.4	Adsorption of rebeccamycin to adsorbent particles.....	26
3.3	Cultivation methods.....	26
3.3.1	Cryopreservation and inoculation	26
3.3.2	Shaking flask cultivations	26
3.3.3	Bioreactor cultivations	27
3.4	Analytical methods	30
3.4.1	Cell dry weight concentration determination	30
3.4.2	Glucose quantification	31
3.4.3	Rebeccamycin extraction and quantification.....	31

3.4.4	Amino acid quantification.....	32
3.4.5	Determination of the volumetric mass transfer coefficient (k_La)	33
3.4.6	Calculation of maximal oxygen transfer rate	33
3.5	Investigation of the pellet structure	34
3.5.1	Microscopy and image analysis.....	34
3.5.2	Pellet slicing	35
3.5.3	Viability staining and CLSM.....	35
3.5.4	Pellet viability via flow cytometry	36
4	Results and discussion.....	38
4.1	Microparticle enhanced cultivation.....	38
4.1.1	Glass microparticle concentration and growth kinetics	38
4.1.2	Surface modified microparticles.....	46
4.2	Macroparticle enhanced cultivation	54
4.2.1	Screening of particle diameters	54
4.2.2	Kinetic and physiological effects of glass bead addition	55
4.2.3	Morphological pellet characterization with glass bead addition	58
4.2.4	Variation of stress energy and stress frequency	63
4.2.5	Effects of additional lecithin supplementation	68
4.3	Membrane aerated stirred bioreactor cultivations	73
4.3.1	Aeration through a manually installed silicone tube	74
4.3.2	Characterization of a pressure-based membrane aeration system	80
4.3.3	Cultivation in the pressure-based aeration system	83
4.4	Particle-based rebeccamycin recovery with adsorbent resins.....	85
4.4.1	XAD resin characterization.....	86
4.4.2	XAD resins in cultivations of <i>L. aerocolonigenes</i>	88
5	Conclusions and future prospects	96
6	List of abbreviations and symbols.....	99
7	References.....	101
