Acknowledgment	i
Abstract	iii
Zusammenfassung	v
Contents	vii
Nomenclature	ix
Chapter 1 Introduction.....	1
1.1 Background of Inertial Electrostatic Confinement.....	1
1.2 Magnetic Nozzle for IEC Plasma Acceleration.....	6
1.3 Potential Applications	10
1.4 Motivation and Difficulties	11
1.5 Thesis Structure.....	12
Chapter 2 Fundamentals of DC Discharge and IEC Theory.....	13
2.1 Fundamentals of DC Plasma Discharge.....	13
2.2 The New Perspective of the IEC Working Principle.....	23
2.3 Implementation of the IEC-SDL Model.....	29
2.4 Summary of IEC Discharge Theory.....	46
Chapter 3 Plasma Acceleration in Magnetic Nozzle.....	47
3.1 Summary of the Plasma Transportation and MHD Flow Theory	47
3.2 Plasma Acceleration in a Divergent B-field.....	58
3.3 Plasma Detachment Mechanism.....	62
3.4 Design Criteria of MN for IEC Plasma Source	64
Chapter 4 IECT Design and Test Facility	83
4.1 The Design Concept and Considerations of IECT	83
4.2 Phase I: IEC Discharge Experiment.....	87
4.3 Phase II: IECT Experiment	95
4.4 IECT Test Facility	98
Chapter 5 Plasma Diagnostics for IEC Plasma Sphere.....	107
5.1 Narrow Spectral-bandwidth Imaging	107
5.2 Optical Emission Spectroscopy	110
5.3 Collisional Radiative Model.....	117
Chapter 6 Plasma Diagnostics for IECT Plume.....	129

6.1	Principle of the Electrostatic Probe	130
6.2	Probe Design and Experimental Setup	137
Chapter 7 Discharge Evaluation of IEC Plasma Source.....		143
7.1	Discharge Behavior of IEC Plasma Source	143
7.2	SDL Characteristics	149
7.3	Conclusions of IEC Discharge Experiment.....	176
Chapter 8 EMN Discharge and Plume Characteristics		181
8.1	EMN Discharge Characteristics	182
8.2	IECT Plume Properties.....	191
8.3	Summary of EMN Discharge Characteristics and Plume Properties	207
Chapter 9 Conclusion.....		211
9.1	Discharge of IEC and SDL Theory	212
9.2	Plasma Confinement and Acceleration by EMN	214
9.3	Summary.....	217
9.4	Outlooks and Suggestions for IECT Development	217
Bibliography.....		219
Appendix.....		235
