

Contents

1	Introduction and Motivation	1
1.1	Historical development of light-emitting diodes	1
1.2	Current state of GaN-based solid-state lighting	4
1.2.1	Light extraction	5
1.2.2	Dislocations	7
1.2.3	Quantum-confined Stark effect	7
1.2.4	Efficiency droop	8
1.2.5	Green gap	10
1.2.6	Color rendering index	12
1.2.7	Correlated color temperature	12
1.3	GaN-based core-shell columnar LEDs	13
2	Physical properties of group III-nitride system	17
2.1	Crystal structure and band structure	17
2.2	Spontaneous and piezoelectric polarization	20
2.3	Impurities	21
2.4	Doping	22
2.5	Phase separation	23
2.6	Polarized emission	24
3	MOVPE Of GaN-based core-shell LED structures	27
3.1	Overview of MOVPE growth processes	27
3.1.1	Precursors and MOVPE-setup	27
3.1.2	Basic principles of MOVPE	28
3.1.3	Fundamental MOVPE processes	29
3.1.4	Temperature phases in MOVPE	33

3.2	Substrates	35
3.3	Growth of GaN columnar structures	38
3.4	Growth of GaN-based shell structures	41
4	Characterization approaches	45
4.1	Visible-light microscopy	45
4.2	Scanning electron microscopy	46
4.3	Transmission electron microscopy	47
4.4	Energy-dispersive X-ray spectroscopy and Auger electron spectroscopy	49
4.5	Cathodoluminescence microscopy and spectroscopy	50
4.6	Photoluminescence spectroscopy	51
4.7	High resolution X-ray diffractometry	54
4.8	Atomic force microscopy and Kelvin probe force microscopy	54
5	Catalyst-free self-organized GaN columns	57
5.1	Nucleation	58
5.2	Growth of self-organized GaN columns	61
5.2.1	Essential growth parameters	61
5.2.2	Growth mechanism	65
5.2.3	Failure of VLS mechanism	69
5.2.4	Polarity of GaN columns	75
6	N-polar GaN columns and core-shell LEDs	77
6.1	Growth optimization	79
6.2	Mixed polarity	86
6.3	Growth kinetics and mass transport mechanisms in GaN column growth	92
6.3.1	Growth model of selective area MOVPE	92
6.3.2	Growth kinetics and mass transport mechanisms by using a low silane flow of 16.5 nmol/min	93
6.3.3	Growth kinetics and mass transport mechanisms by using a high silane flow of 165 nmol/min	100
6.4	The optical properties of GaN columns	103
6.5	Core-shell LEDs	104
7	Ga-polar GaN columns and core-shell LED structures	111
7.1	Growth optimization	113

7.2	Growth kinetics and mass transport mechanisms	121
7.3	Sidewall passivation effect	126
7.4	Tow-step growth method and high aspect ratio core-shell LED structures	128
7.5	Spacer layer between MQW and n-GaN core	132
7.6	Optical and electrical properties of Ga-polar core-shell LED structures	133
8	Summary and outlook	139
	Zusammenfassung	143
	Acknowledgment	145
	Bibliography	147
	Publication and Patent List	171
